Technical Consultant at Workday with 5+ years of professional experience, specializing in enterprise data conversion across HCM, Payroll, and Benefits modules. Builds ETL pipelines and automation tools alongside client implementations — reduced 6-hour audit processes to 45 minutes and handles data flows for 500K+ records.

TECHNICAL SKILLS

Programming: Python 3.8+ (Pandas, Polars, PyQt6), SQL, PL/SQL, Java

Data Engineering: ETL pipeline development, data quality frameworks, incremental loading patterns, Apache Spark

Workday Platform: Data Conversion (HCM, Benefits, Payroll, Payroll History, Learning), EIB, iLoad, Workday Studio, DTS

APIs & Integration: RESTful API consumption, SharePoint API (OAuth 2.0), third-party integrations

Cloud & Tools: AWS basics (Lambda, Cognito), Databricks, Git, structured logging

Performance Optimization: Polars implementation (5–10x performance gains), multi-core processing, memory optimization

Database Systems: Oracle EBS/Cloud, SAP EDI, MySQL, PostgreSQL

Data Formats: CSV, JSON processing and transformation workflows

PROFESSIONAL EXPERIENCE

Technical Consultant, Data Conversion

January 2026 – Present

Workday

Costa Rica

- Lead enterprise data conversion engagements, mapping HR data from legacy systems (ADP, Dayforce, SAP) to Workday using SQL stored procedures across HCM, Benefits, Payroll, Payroll History, and Learning modules
- Execute full conversion lifecycle: source data analysis, field mapping, transformation logic, iterative load-validate cycles, and production cutover for each client tenant
- Collaborate directly with client teams to resolve data quality issues and ensure clean final loads across multiple concurrent implementation projects

Product Data Analyst

July 2024 – January 2026

World Wide Technology

Costa Rica

- Built enterprise data pipeline extracting data from SharePoint, transforming and loading back to SharePoint, then automating Power BI connections with incremental loading, reducing processing time by 80%
- Developed production Python applications: audit system processing 500K+ records (6 hrs → 45 min), part number truncation tool, and automated compliance reporting pipeline
- Implemented API integrations with OAuth 2.0 authentication for 350+ customer data flows, including SharePoint-to-Power BI automated pipelines and data validation workflows
- Optimized data processing performance migrating from Pandas to Polars achieving 5–10x speed improvements and 75% memory reduction across enterprise datasets
- Created automated workflows including PyQt6 GUI applications, fuzzy matching algorithms (85% accuracy), and real-time monitoring systems

EDI Analyst

July 2023 – July 2024

DXC Technology

Remote

- Achieved 95% resolution rate troubleshooting SAP EDI data mapping and system connectivity issues
- Monitored production data flows processing 200K+ daily records and supported new client EDI implementations
- Collaborated with clients to resolve data transformation and integration challenges

Inside Sales Engineer

August 2022 – July 2023

Emerson

Escazú, Costa Rica

- Improved sales conversion rates through systematic follow-up and technical solution development
- Conducted technical reviews ensuring smooth operations and timely product delivery

Content Test Specialist

November 2021 – July 2022

Amazon

Heredia, Costa Rica

- Maintained 98% accuracy testing Alexa skills and new product features
- Executed 500+ test cases for software and devices, reducing post-launch issues

EDUCATION

Universidad Cenfotec <i>Bachelor's Degree in Software Engineering</i> Currently 60% completed — expected graduation December 2026 / February 2027	2021 – 2026 <i>Costa Rica</i>
Growup Data Analytics <i>Data Analysis Certifications</i> Data Analysis with SQL Data Analysis with Power BI Data Visualization with Excel	2020 – 2021 <i>Costa Rica</i>

KEY PROJECTS

Enterprise Audit System <i>Python, Polars, Pandas</i> - Built production audit system processing 500K+ records, reducing audit time from 6 hours to 45 minutes (92% reduction) - Implemented automated data quality validation and compliance reporting pipeline with anomaly detection	2025
SharePoint-to-Power BI ETL Pipeline <i>Python, OAuth 2.0, SharePoint API</i> - Architected incremental ETL pipeline with OAuth 2.0 authentication, reducing processing time by 80% across 350+ concurrent data flows - Implemented daily automated execution with built-in error recovery and monitoring	2025
Intelligent Data Normalization Tool <i>Python, PyQt6, Fuzzy Matching</i> - Developed PyQt6 desktop application with fuzzy matching algorithm achieving 85% accuracy for automated data normalization - Reduced manual data entry by 4 hours per week across enterprise datasets	2025
Databricks Medallion Architecture Pipeline <i>PySpark, Delta Lake, Great Expectations</i> - Built end-to-end ETL pipeline with Bronze/Silver/Gold architecture processing 100K+ transactions with automated data quality validation - Implemented interactive Streamlit dashboard for pipeline monitoring and analytics	2025

CERTIFICATIONS

Técnico Superior en Desarrollo de Software Python para el análisis de datos Scrum Fundamentals Certified (SFC) Cert Prep: Scrum Master SAP for Beginners
